My Portfolio
Android Developer

Welcome to my portfolio as an Android developer! In this presentation, I'll share my technical skills, highlighted projects, and future projects.

Andre de Pinho

My Technical Skills

1 Android Studio 🤖

I use Android Studio as the primary development environment for creating native Android apps.

2 Java & Kotlin 🚀

I have a solid knowledge of both programming languages, especially for Android app development

3 Android - JetPack - Compose 🚀

I have solid knowledge in Jetpack Compose, a modern, declarative UI framework for Android app development.

4 Data Base 👩‍💻

Basic knowledge in database creation and maintenance with Microsoft Access, MySQL, and Firebase.

5 XML & JSON 📲

I am proficient in using XML and JSON for data exchange and UI design.

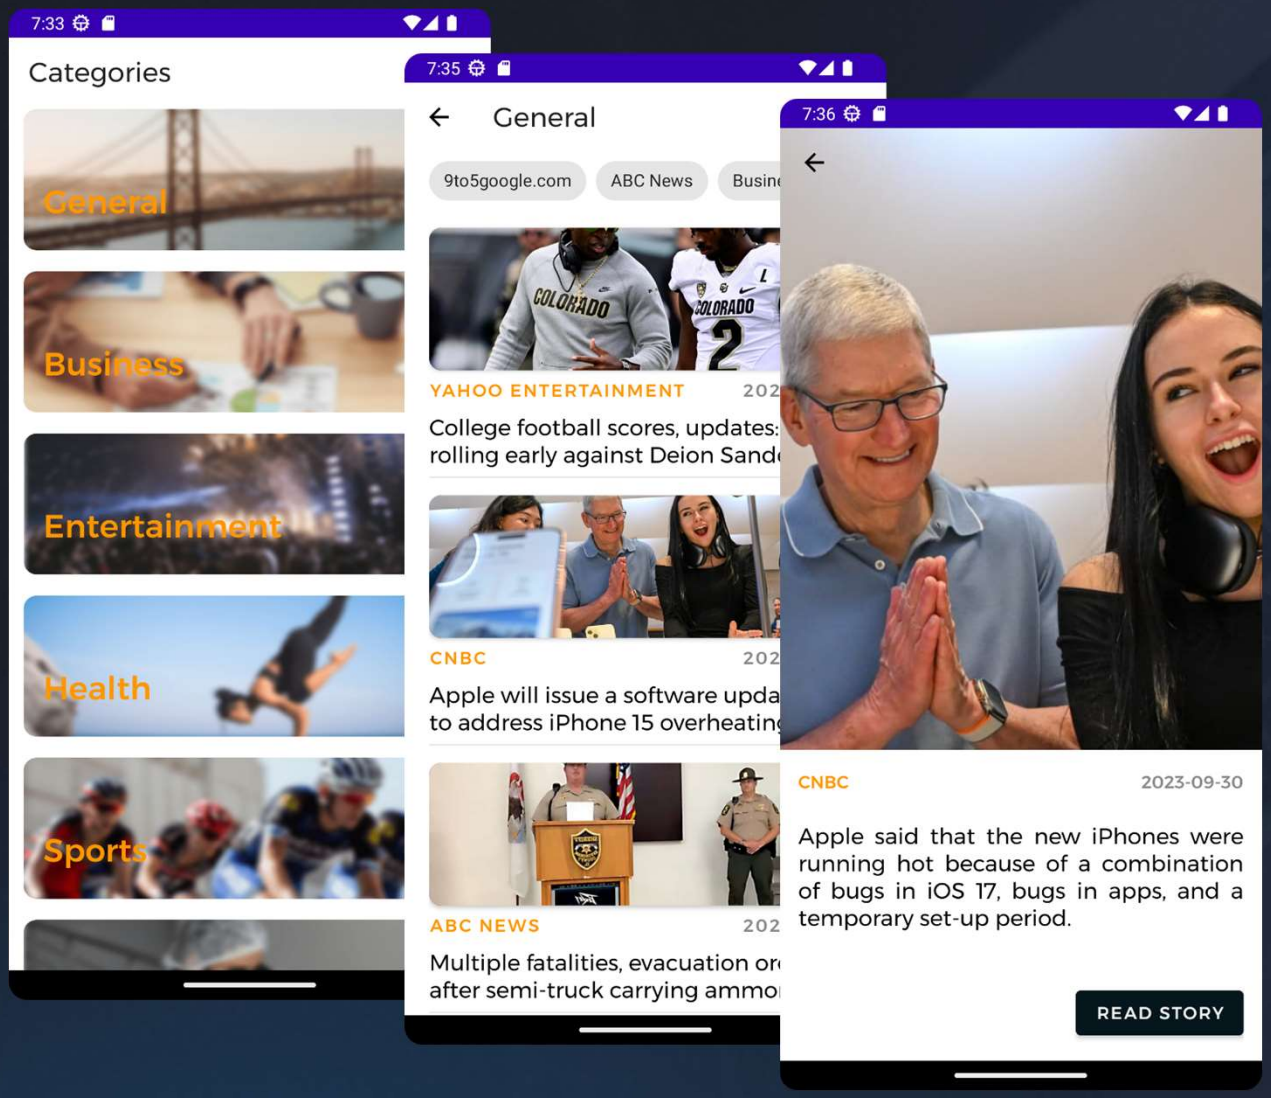
6 Kotlin Multiplatform 📲

I am starting to acquire knowledge in this new Android tool. It is designed to simplify the development of cross-platform projects, allowing developers to write shared code that can be utilized across different platforms, such as Android, iOS, and more.

5 Future Skills 👩‍🎓

I'm interested in expanding my knowledge, not only in Android development (Jetpack Compose) but also in gaining knowledge in iOS development.

My Project Highlights



App Top News

I developed an application that allows users to view the most relevant news by categories of a specific country, which by default is the US. As well as the details of it and through an open browser to the source of it.

Used Technologies

- Android Development
- MVVM Architecture
- Retrofit & API News Integration
- Recycler View & UI Elements

My Project Highlights

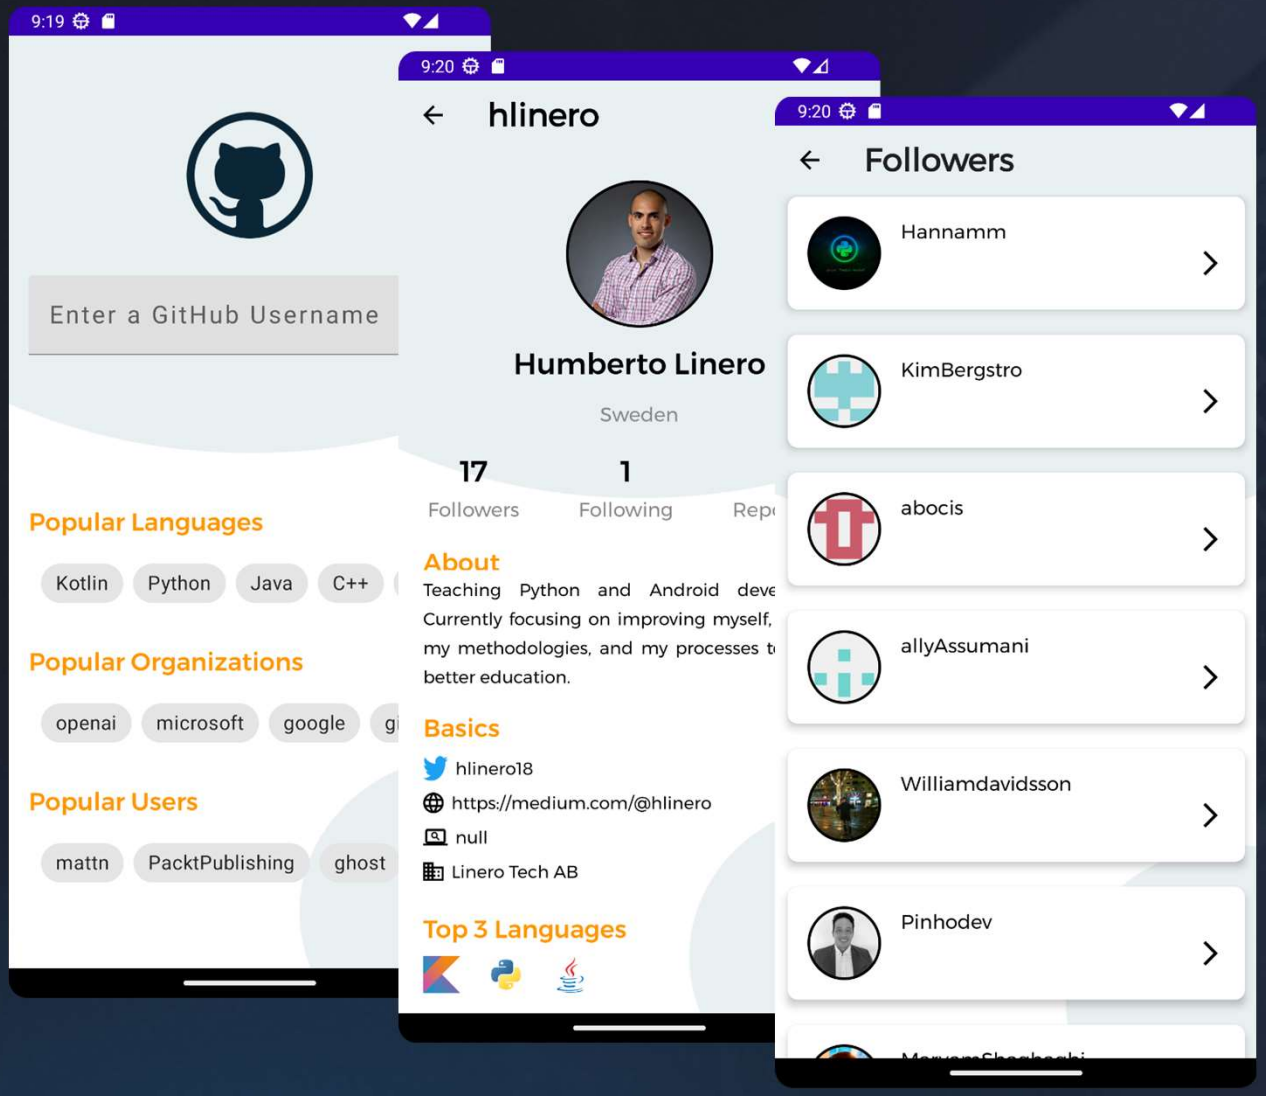
App Top Weather

I developed an application that allows users to view the weather conditions of certain cities around the world. It provides information about whether it is day or night in that city, as well as the temperature, humidity, cloudiness, and the level of ultraviolet radiation.

Used Technologies

- Android Development
- MVVM Architecture
- Retrofit & API Weather Integration
- Recycler View & UI Elements

My Project Highlights



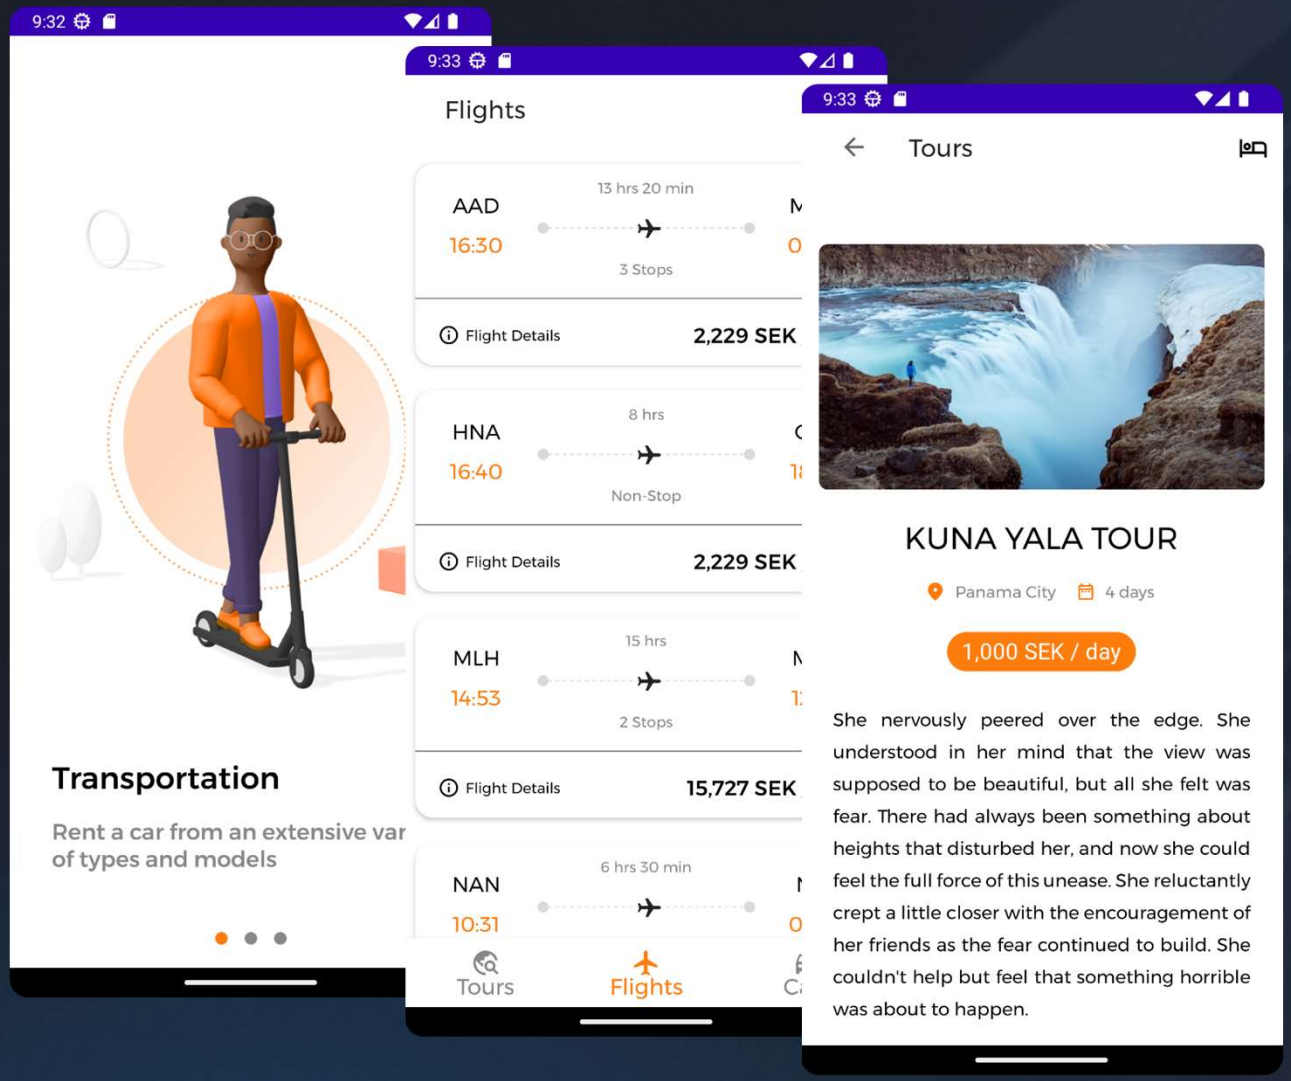
App GitHub User

I developed an application that empowers users to access essential details of a designated GitHub user, as specified by the user. Additionally, it offers insights into the most prevalent programming languages, organizations, and users.

Used Technologies

- Android Development
- MVVM Architecture
- Retrofit & API GitHub Integration
- Recycler View & UI Elements
- Data Base Firebase

My Project Highlights



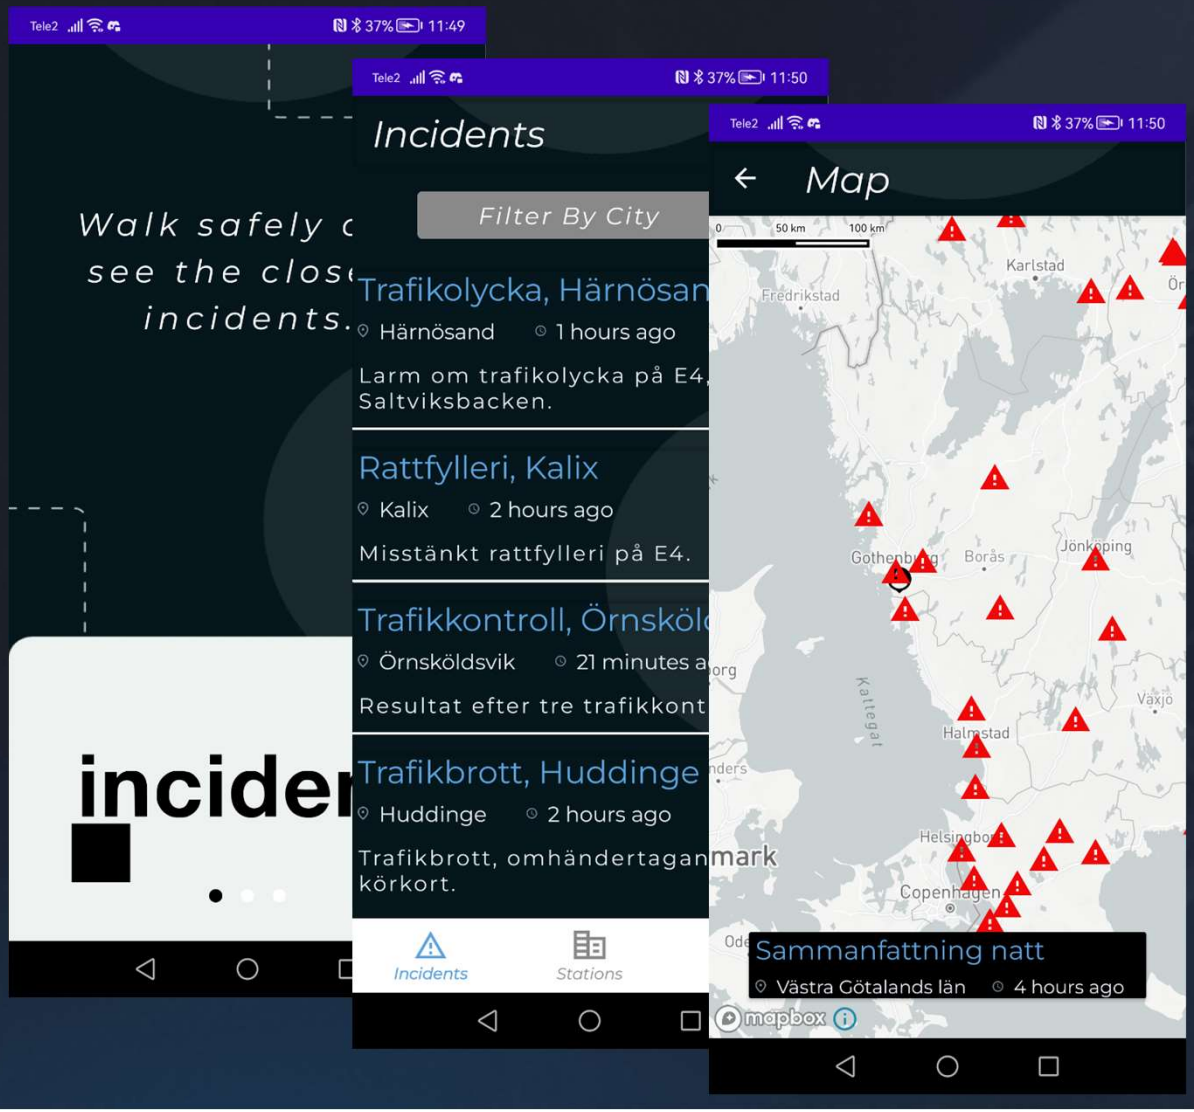
App Tour Guide

I developed an application that enables users to view tours, flights, rental cars, and hotels stored in a database. Users can access relevant details about these tours, flights, rental cars, and hotels.

Used Technologies

- Onboarding Screens & Fragments
- Home Screen Navigation
- UI Refactoring & Clean-Up
- Recycler View & Row Data Base
- Design Material 3

My Project Highlights



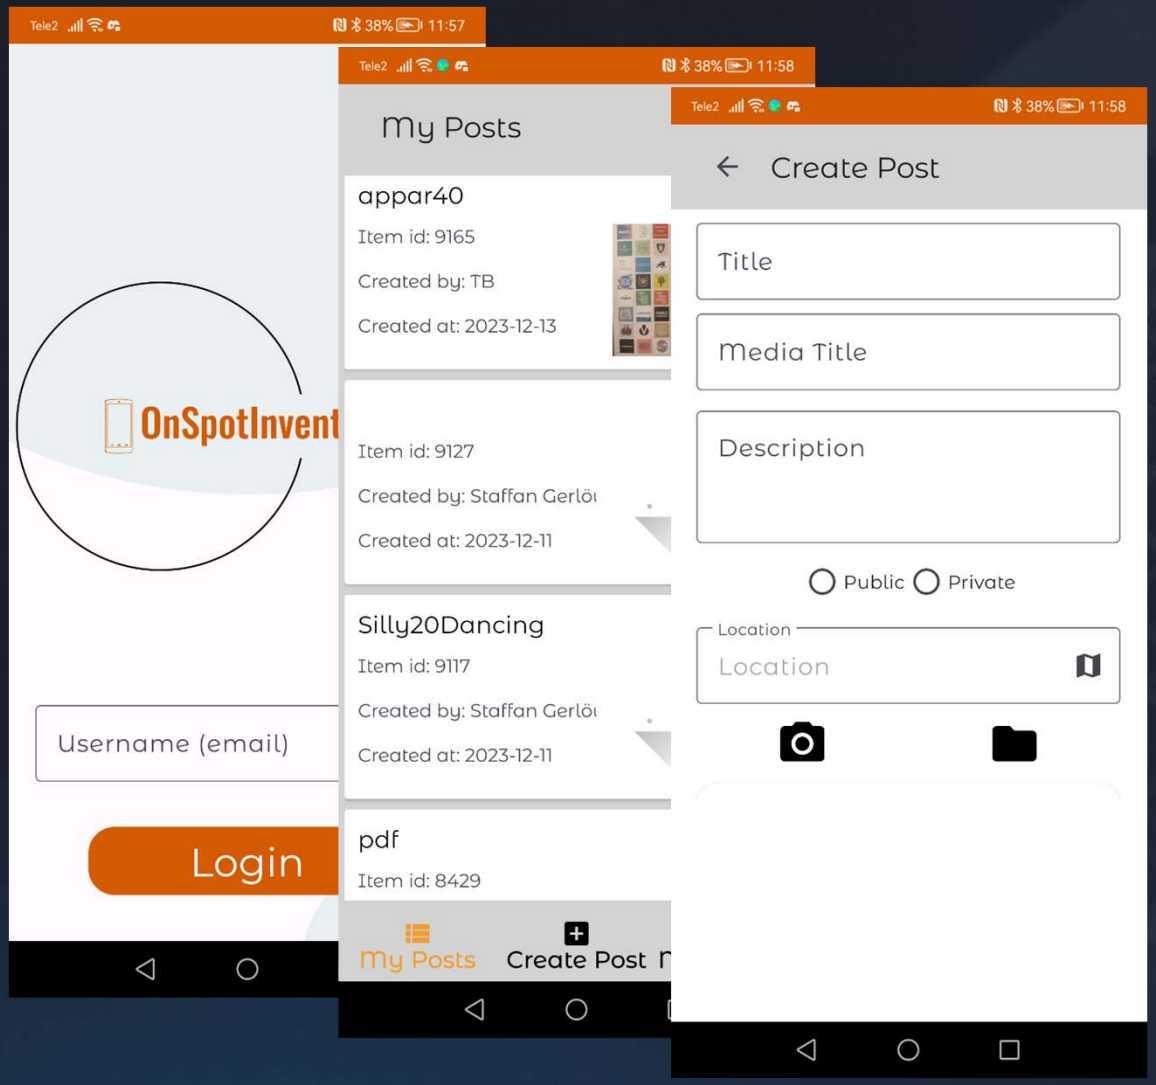
App Police Incidents

I have developed an application that allows users to locate incidents and police stations in a specific country, Sweden in this case. It also enables users to pinpoint these incidents and police stations on a map.

Used Technologies

- Onboarding Screens & Fragments
- Home Screen Navigation
- UI Refactoring & Clean-Up
- Recycler View & Design Material 3
- Retrofit & API Police Integration
- Mapbox platform and Google Maps SDK

My Project Highlights



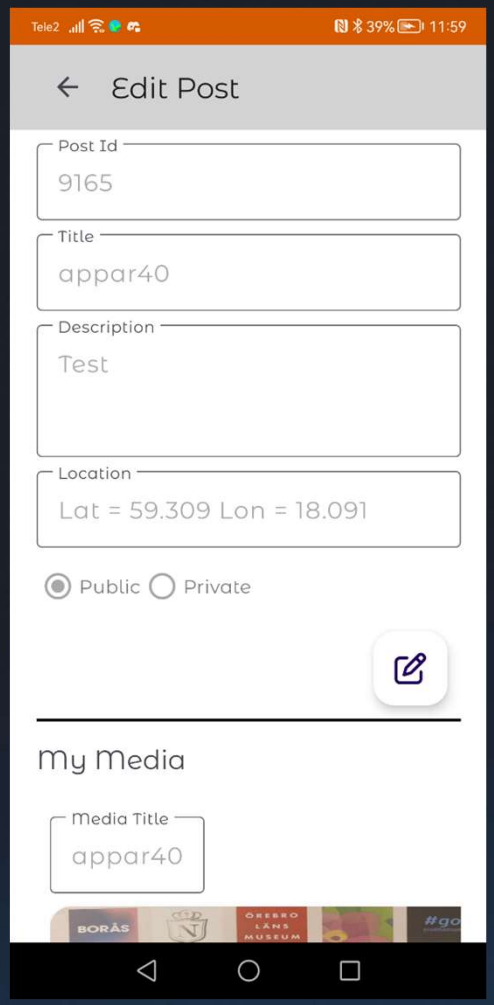
App OnSpotInventory

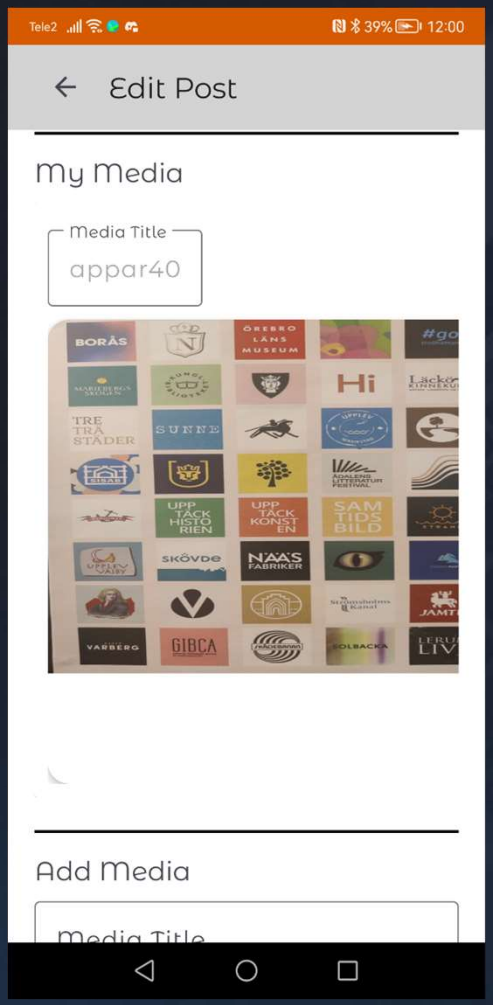
In my internship at OnSpotStory, I developed an application that enables users to add or modify posts, including both text and images, in the ML/Omeka Database using an Android device from any location. This application facilitates the inclusion of all necessary fields for post creation, such as image uploads and precise positioning.

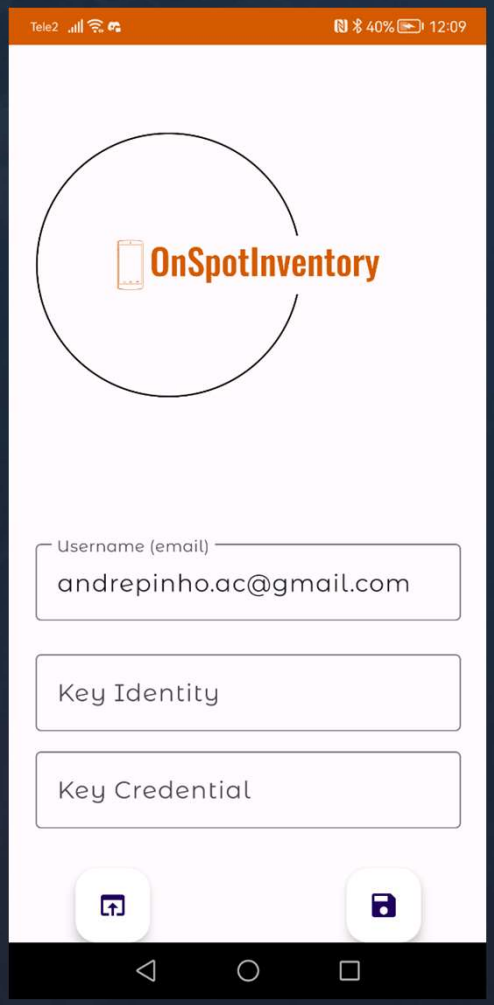
Used Technologies

- Home Screen Navigation
- UI Refactoring & Clean-Up
- Recycler View & Design Material 3
- Retrofit & API Omeka Data Base
- Camera Android X
- Page 3 on Android
- Google Maps SDK

My Project Highlights







Future Challenges

1

Update App Top News

I'm planning to combining Top News and Top Weather into one application. As well as giving the user the possibility of choosing the country where they want to see their relevant news and meteorological conditions in the main cities of the selected country.

2

Update Top Tour Guide

Improve the application by allowing users to specify the destination and origin cities, as well as the dates of their travel. Utilize this information to show relevant flight options, hotels, car rentals, and activities at their chosen destination.

3

App Events YMG

The YMG is a family event company based in Stockholm, Sweden. The company intends to develop its own application where users can view and purchase the events they organize.

Recommendation

Andre proactive approach to problem-solving also deserves commendation. He faced challenges head-on, offering innovative solutions that showcased his adaptability and resourcefulness. His resilience in high-pressure situations was truly commendable.

Benjamin Garcia

General Manager

GSOI AS

Email: benjamin.garcia@gsoi.no

Recommendation

I had the privilege of working closely with Andre as our inspector in Sweden for various international projects while managing him from our Stavanger office. Andre's dedication and expertise in his role have left a lasting impression on me.

Humberto Linero

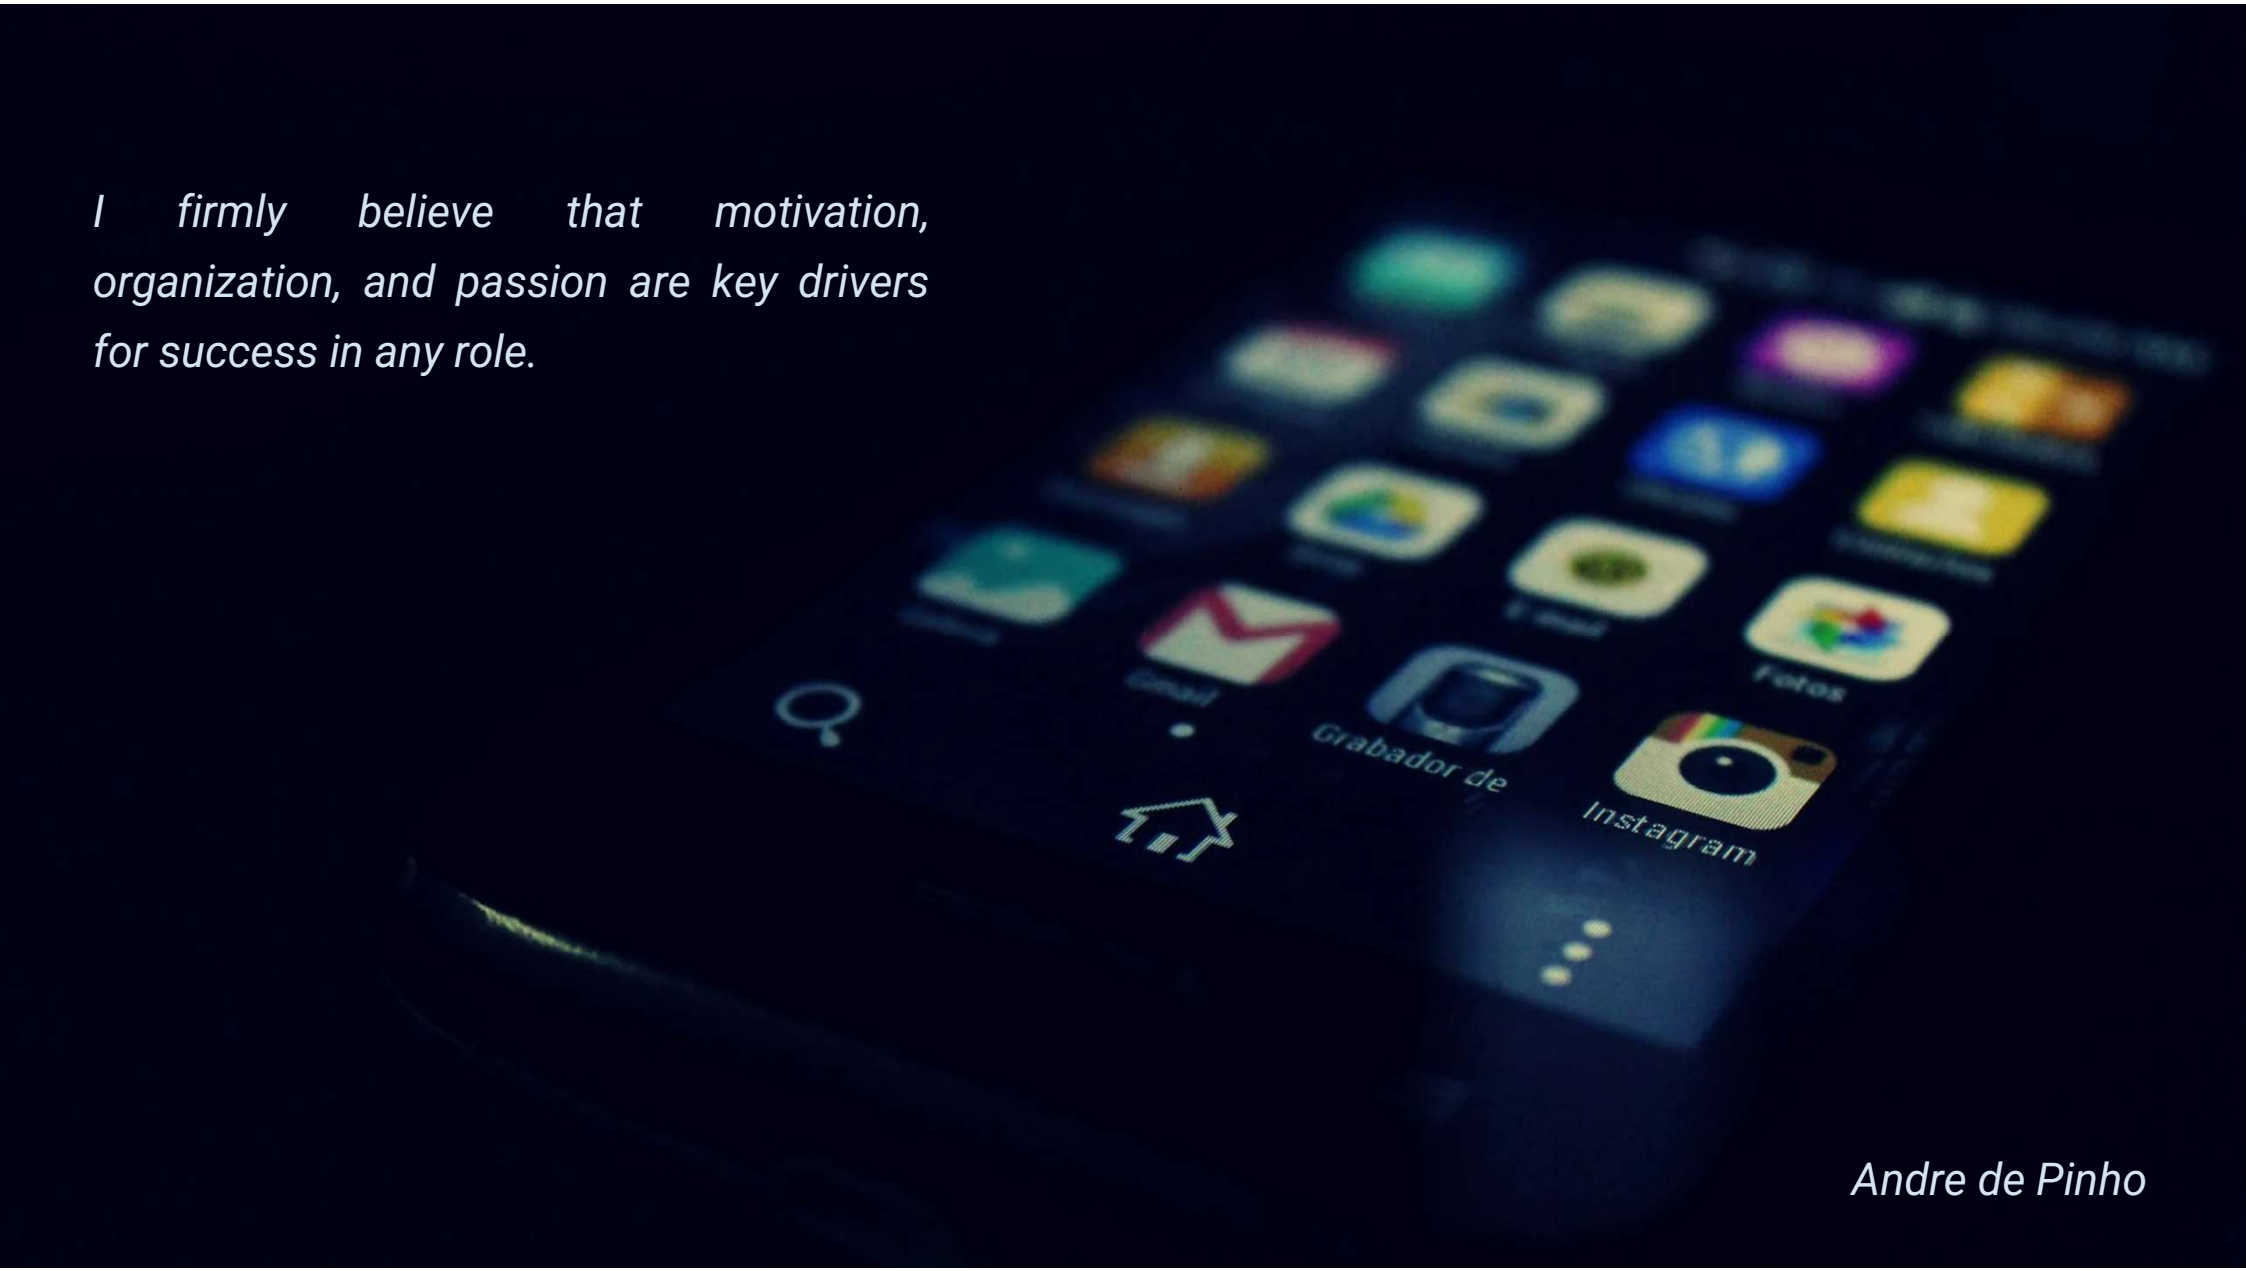
Android Developer

Linero Tech AB

Email: humberto@linerotech.se

Recommendation

I have no hesitation in recommending Andre for an Android development role. Moreover, in case there might be knowledge he is missing, thanks to his problem-solving and self-learning he will quickly learn the things he needs to deliver value to the company.



I firmly believe that motivation, organization, and passion are key drivers for success in any role.
